

Comverge Networks comment on Telstra no longer deploying copper in greenfield land estates.

In response to the report of Telstra's advice to developers that it would no longer deploy copper network in Greenfield developments, Comverge Networks National Operations Manager, Mr. Ken Ashley said of the move;

"With the Federal Government's NBN initiative and the requirement for fibre optic cable instead of copper cable in greenfield estates, it is understandable that Telstra would stop deploying copper in favour of fibre.

Comverge Networks has deployed fibre optic network technology in residential and commercial projects for many years and I can assure developers that the cost of doing so has reduced significantly in recent times and will no doubt continue to do so.

Ultimately the residents of greenfield estates with fibre to the home will have early access to an exciting selection of services and applications that would not be available across a copper network. The value of fibre to the home is in what it is capable of delivering now and in the future and the possibilities are endless."

In light of developers being required to deploy fibre to the home, Comverge Networks recently moved from being one of Australia's leading telecommunications network builders and systems integrators to securing a Telecommunications Carrier Licence and becoming a full telecommunications services provider.

Comverge Networks - Background

Comverge Networks is a registered trademark and business owned and operated by Telecommunications Integration Services Pty Ltd. Since its founding in 1992, Comverge Networks (formerly known as PBNConnect) has built a reputation as an industry leader in fibre-optic network design, construction, installation and systems integration.

Comverge Networks' success is built on a foundation of innovation, experience and a reputation for creating intelligent networks to meet the ongoing telecommunications requirements of many industries.

Specialising in the delivery of full range of triple play products, (MATV, SATV, CATV, FTA, CCTV, VOD, VOIP, DATA, Medical, Security & Access Control Systems) over a FTTx PON based network, Comverge Networks is at the forefront of FTTx technology delivering solutions for Greenfield Developments, Resort-Style Gated Communities, Retirement and Independent Living Communities, Retail and Commercial Developments.
